EASILY CONFIGURE RISKPAL

Feature	Description	Configuration
User Profiles	**Every account is assigned a user group. These control access to features and menu options in RiskPal.**	Build your own user groups to reflect your internal set up.
Departments	**Departmental rules and membership determine the approval process and enable the segmentation of data within an organisation.**	Select approving managers, members and templates for each department.
Group Emails	**If there are pre-existing internal email groups for specific management, travel or security teams.**	You can add email groups into risk assessments, allowing team notifications and oversight.
Templates	**Users select from a menu of templates, designed to match common activity, assignment or destination-type.**	Templates ensure your risk assessment is fit-for-purpose and contains information relevant to the task. You can assign risk assessment templates to particular departments or the entire organisation. At template level you can also set Notifications and Attachments rules and configure your Risk Assessment PDF.
Country Information	**Analysis of threats emanating from the likes of conflict, crime, terrorism and civil unrest in destination countries.**	Add your own company-specific intelligence, experiences or travel requirements to the RiskPal country profiles.
Risk Library	**The knowledge base of risk activities/threats and related controls/mitigations within RiskPal.**	Create activities and advice specific to your organisation. React to new threats or environmental changes by updating your content in a centrally managed database. Modify RiskPal content to match your internal protocols.
Suppliers	**The database of supplier services inside RiskPal - containing everything from hotels and restaurants to drivers and Covid-19 supervisors.**	Select how supplier information is or is not shared within teams and the wider organisation. Prohibit or make mandatory particular suppliers. Moderate and publish staff feedback and reviews.
